

finXS™

BY TELEKURS FINANCIAL

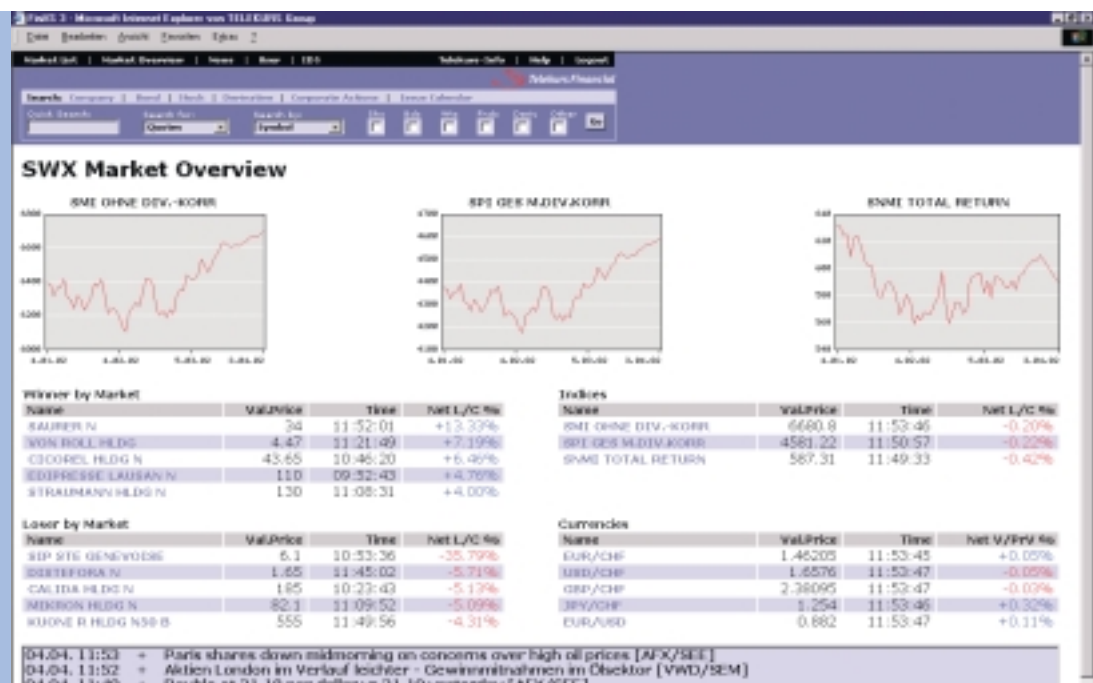

No web browser is complete without this financial information.

AT THE HEART OF THE MARKET

Get more info faster – your direct route to the data you need

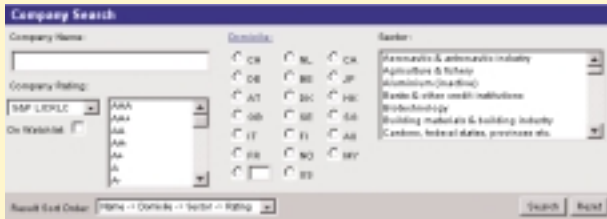

FinXS is a Web-based service that gives you super-fast access to a complete range of data, facts and background information from the world of finance. Thanks to user-friendly navigation, you can surf at ease through the world's financial markets, homing in on selected areas or gaining an overview of the entire range of information offered by Telekurs Financial. With FinXS, you will find all the information or functions you need – the latest quotes, news, historical prices and the basic or event-related data on each financial instrument. And you can have the information presented in the format that suits you best: as a market overview, an accurate chart, set out in your own portfolio, or as a "Heatmap" showing winners and losers.

Markets

Keep yourself fully informed about the world's leading securities markets. Market Overview doesn't just show you where the index is: Charts and Top Performers give you a complete picture of market sentiment, while the News window brings you all the latest information and analyses.

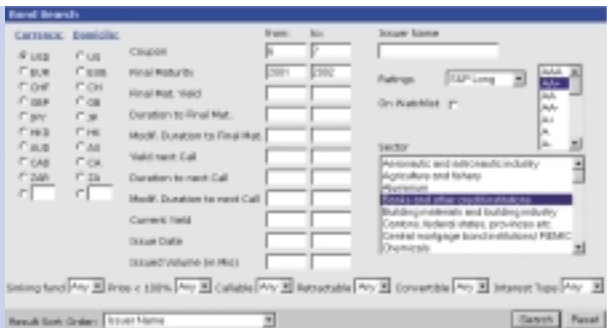

The instruments most commonly traded on the world's major stock markets are summarised in easy-to-read Market Lists. Two buttons   in the Overview will take you to the relevant news or the basic data on the instruments in question. You can supplement the predefined lists with your own User Pages. Here you'll find your personal selection of instruments and data fields (Last, Bid/Ask, Time, etc.).

Valordata Browser: the powerful search engine

The Valordata Browser offers you access to all basic data and securities administration information on financial instruments such as shares, bonds and derivatives, including options, futures and options on futures.

The Valordata Browser will take you straight to the information you actually need, even if your query is a complex one. Drawing on Telekurs Financial's huge database, it finds the instruments that comply with your precise search criteria. Search results can be exported as required.

Enhanced search functions

Sophisticated search functions help you to track down new investment opportunities. Depending on your own particular needs, you can select rights issues, dividends, ratings and other information you may require for any stock.

- Company Search
- Bond Search
- Stock Search
- Derivative Search
- Corporate Action Search
- Issue calendar

Add instrument:

FinXS: customised portfolios for your clients

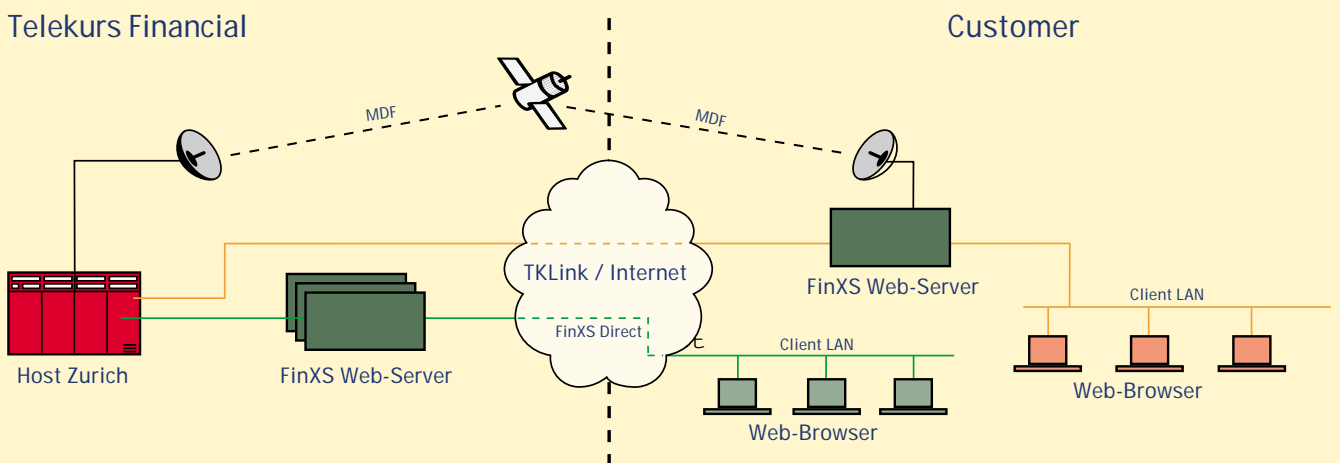

Assemble portfolios for your clients and get fast updates on their performance. A few clicks will take you from current quotes through to the basic data, business news and charts you need for analysis.

And incidentally: a variety of international security numbering systems (including ISIN) are supported by FinXS so as to make your work easier for you.

FinXS: the right solution for everyone

The FinXS web server generates HTML pages from real-time snapshots and distributes them to FinXS users, who view them with their browser. FinXS web servers can be operated either locally on your own network or centrally at Telekurs Financial. For this, the following types of distribution are possible:

- central operation at Telekurs Financial: access via public Internet or extranet
- local operation at the customer's end: data transmission to the web server via satellite, with access via the customer's own intranet.

Recommended browser: Microsoft Internet Explorer, version 5.0 or higher.

Instrument Overview, Full Quote, Arbitrage and News

Instrument Overview gives you an immediate picture of all the key quotes, intraday and historical charts and the latest news. You get a clearer overview – and save time.

In the Full Quote window you can also check out all the quotes for today and the previous trading day. Market depth is shown under «extended bid ask». The Arbitrage function gives you an overview of trading in a particular instrument on all available stock exchanges and contributors.

Heatmap

The Heatmap is a state-of-the-art feature graphically illustrating all the winners and losers on the world's markets. The size of the price changes are indicated by different shades of red or green.

Charts

For market observers, having accurate charts is essential. We track the various financial-sector trends to help you with customised analysis. You can use a number of different chart types and a new volume indicator. You can also choose from various key indicators, such as the moving average or stochastics.

If you want to use the chart in your word processing software, you can simply copy it with the right-hand mouse key and paste it in wherever you like.
